

Management of the visual identity is the cornerstone to maintaining the ALPHA OMEGA's name recognition and awareness. To help you in achieving consistancy in brand presentation, this brand identity standards guide describes your new brand and how it is to be applied. The following text and visual examples outline the proper use of the logotype, colors, and typography.

APPROVED IDENTITY COLORS

Two Colors make up the Alpha Omega identity: black and gold.

The gold should be foil when possible (Foilmark 46). The second option would be Pantone 872. If this must print cmyk, (or for web) use this gradation.

LOGO REPRODUCTION

Only reproduce the Alpha Omega logo in one of these four ways:

TYPOGRAPHY

Only use one font family for business system.

When appropriate, if grey type is needed for web or email, use R-187, G-176, B-166.

If gold type is needed, use R-187, G-161, B-100.

LOGO CLEAR SPACE

Clear space is essential for the logo to stand out in a positive light. Therefore, the surrounding area must be uncluttered. Careful consideration must be used when placing the logo close to graphic elements (refer to the measurements shown here for the amount of clear space required around the logo).

X= minimum clear space measure

LOGO ORIENTATION

Logo should NEVER be rotated or compressed

FOR EMBROIDERY

Use this thread color, or whichever is a closest match to the thread or PMS color. The thread colors that we use for Alpha Omega are as follows:

Black = m600Gold = ra2332
